

BRUSHES

BARREL CLEANING BRUSHES

Technical Description:

Barrel cleaning brushes are ideal for cleaning barrel cylinders of injection moulding machines. The brushes are available as crimped brass wire or straight polyamide (nylon).

Disclaimer!

Only use the brush with the indicated maximum RPM. The max RPM is only allowed when the brush is clamped at least 10 mm into the tool. When the brush is inserted into a suitable work piece, higher RPM may be possible. Always use the brush rotating clockwise.

Properties:

Brush Length (BL): 100 mm
Brush Diameter: 20-200 mm
Material: Crimped Steel Wire
Max RPM: 1000-2500
